## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-28, drawn to a method of inspecting a curved object, classified in class 356, subclass 237.1.
- II. Claims 29-33, drawn to a method for adjusting for curvature distortion in a scanned image comparing , classified in class 356, subclass 394.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because [ **the subcombination requires adjusting at least one pixel in the inspection image in one direction using the formula:  $X_{adj} = R \times \arcsine(X_i/R)$ , and adjusting said pixel in the other direction using the formula:  $Y_{adj} = C - ((C - Y_i) / \cos \theta)$ , where R is the radius of the curved object,  $(X_i, Y_i)$  are the coordinates of said pixel, C is a reference point on the inspection image,  $\theta$  is the angular location above or below the equator of the curved object, and  $(X_{adj}, Y_{adj})$  are the coordinates of the adjusted pixel not required by the combination**}. The subcombination has separate utility such as

**[adjusting at least one pixel in the inspection image in one direction using the formula:  $X_{adj} = R \times \arcsin(X_i/R)$ , and adjusting said pixel in the other direction using the formula:  $Y_{adj} = C - ((C - Y_i) / \cos \theta)$  which does require the particulars of the combination ( e.g. the inspecting a curved object, and comparing the adjusted image with a predetermined master image)].**

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

A telephone call was made to Mr. Troy R. Lester (Reg. No. 36,200) on 1/4/06 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sang Nguyen whose telephone number is (571) 272-2425. The examiner can normally be reached on 9:30 am to 7:00 pm.
